

TECHNOLOGY AT CLIMATE PLEDGE ARENA

The Climate Pledge Arena utilizes some of the most advanced technologies to review design and constructability aspects of the project, such as 3D Building Information Models (BIM), Virtual Reality (VR), and Augmented Reality. Recently we used the Oculus Quest and an empty 2nd floor to digitally immerse people in Climate Pledge Arena. During the second week of July, over 3 days, we hosted 2,997 people in the arena.
